- Link to schedules

ALLOCATION

SCHEDULE, ASSIGN AND MONITOR PROJECT RESOURCES

- Control allocation process
- Flexible workflow model
- Prioritize best projects
- Real time capacity model
- Integrates to financials
- Link to schedules
- Task/stage/project level
- Many configuration options

TIME RECORDING

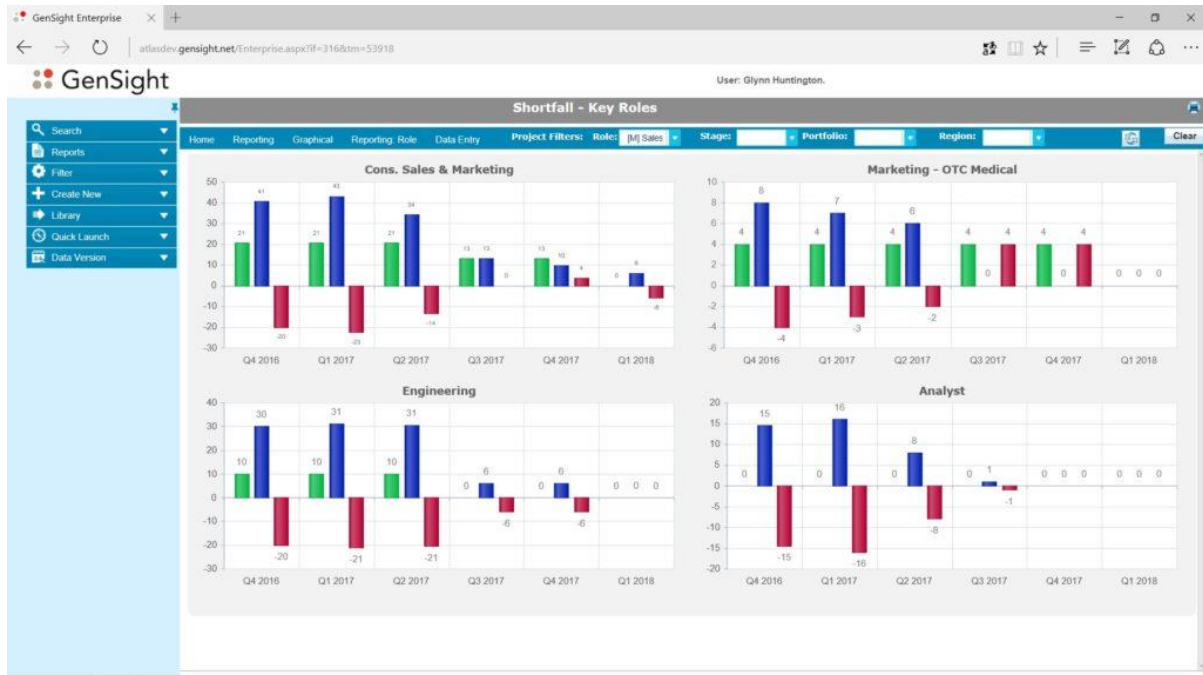

CAPTURE ACTUAL TIME AND COST ON PROJECTS

- Simple to use
- Mobile device support
- Capture project time
- Track time/costs
- Rollup to portfolio
- View balance
- R&D tax credit reports
- Analyse deployment

GenSight has a powerful resource planning model to forecast and manage the resource requirements of your projects. The model is flexible, and covers planning by role and/or individual named resource. Analysis by role can be configured to suit the roles/functions in your business. The resource planning model covers both the supply and demand side of managing resources, over time, so you can manage capacity requirements.

FORWARD PLAN RESOURCE REQUIREMENTS, CAPACITY AND SHORTFALLS

ALLOCATE AND DEPLOY RESOURCES MORE EFFECTIVELY

GenSight has a flexible resource allocation workflow model – spanning the stages of request, assign and schedule – which you can utilise according to your specific business needs. These functions link with the resource planning model in GenSight if you choose to use it, or can be used independently. It's all about flexibility, so you can deploy the tools as you need them.
